Hi-Fulvic 10

A natural source of liquid Fulvic acid provides excellent chelating, complexing and plant stimulating properties.

Hi-Fulvic 10 is suitable for use in conjunction with most fertilisers and herbicides, to increase the efficiency for both foliar and furrow applications. In a powerful liquid form, it provides a multitude of benefits to plant and soil life. Acts as an organic chelating and complexing agent, it helps to re-establish a balance in the production cycle by solubilising and mobilising minerals elements for absorption by living cells. Fulvic is a powerful microbiology stimulant.

Benefits

- ✓ A versatile liquid for seed coating, foliar application, and soil conditioning.
- ✓ An exceptional standalone fertiliser and stimulant for plant and microbial life.
- ✓ A detoxifying agent through chelation, complexing, and solubilising of compounds.
- ✓ Effective in all agricultural conditions. Enhances nutrient uptake, buffers toxic pH conditions, and enhances all agricultural liquids inputs.
- ✓ Increased availability of elements such as phosphorous, silica and zinc.
- ✓ Stimulation of naturally occurring growth enhancers and antioxidants.

Typical Analysis

	G/L	%W/V	% W/W
Fulvic Acid	105	10.5	9.9
Potassium (K)	18	1.8	1.65
Organic Carbon (OC)	49	4.9	4.5
Organic Matter (OM)	83	8.3	7.7
pH:	4.6 – 5.1		
SG	1.00 -1.11		

Application Rates

Foliar	Mix @ 0.5 – 1.0% in water	
Furrow Injection	Suitable to be mixed with liquid nitrogen. Discuss rates with your agent	
Fertigation	Apply 5-30L/ha. Variable water rates.	

Packaging: 20L, 200L and 1000L

Version Created:02nd October 2024
