

## Technical Brochure

- ✓ Foliar
- ✓ Furrow

### Hi-Boost

A multi-purpose foliar and tank pH adjustment liquid focused on delivering phosphorous, manganese, zinc and sulphur whilst improving the uptake of many other common agricultural products.

Hi-Boost provides an alternative to solid forms of P. It is applicable to all crops when requiring essential energy.

#### Benefits

- ✓ Foliar phosphorous is a concentrated method of application and provides greater uniformity in plant active P, accounting for areas in crop where uptake from the soil is limited
- ✓ An efficient tool for application of essential P in later crop stages, when solid forms cannot suffice
- ✓ Easily combines with and can improve the uptake of other agricultural liquid inputs

TYPICAL ANALYSIS	G/L	% W/V	W/W%
Phosphorous (P)	54	5.40	3.80
Manganese (Mn as Chelate)	65	6.50	4.58
Sulphur (S)	60	6.00	4.23
Zinc (Zn as Chelate)	70	7.00	4.93
Plus Fulvic Acid			
pH	1.0-1.3		
SG	1.42-1.48		

#### APPLICATION RATES

Application	Rate/Ha	Water
Broadacre	0.5-2L	50-100L
Horticulture	0.5-4L	300-1500L/ha
Orchards (Stone fruit excluded)	0.5-1L	1000L
Furrow Injection	Rate/Ha	Water
Broadacre	2-5L	80L
Fertigation	Rate/Ha	Water
Horticulture, Orchards	5-10L	Variable

**Important:** Do not foliar spray and crop during flowering

**PACKAGING**  
20L, 200L and 1000L
